

AMENDMENTS TO THE SPECIFICATION:

Please amend the paragraph beginning at page 3, line 18, as follows:

For example if one were building a program that ran a company pay ~~role~~
roll using Object Orientated techniques you would write a class for the companies
employees, a class for tax information and some business logic classes
representing the way that the system is to make payments. Each employee would
be represented within the system by an *object instance* which would be a
realisation of the appropriate class, so the tax office would be represented by just
one instance of the tax class.
